Commentary on the Western & Wales Timetable Planning Rules 2024

Version 4.1
Final Principal and Preliminary Proposal for Subsidiary Timetable Change 2024

This document is a covering note for the Timetable Planning Rules – Final Principal and Preliminary Proposal for Subsidiary Change Timetable 2024 – and provides a specific commentary to the route described above.

In the Timetable Planning Rules document each change in content is indicated by the following convention:

New or Amended text is red
~~Deleted text is green and struck through~~

The change is also highlighted with a thick vertical line at the right hand side of the page.

The following is a summary of changes in content from Version 4.0 of the 2024 Timetable Planning Rules.

---

1. Introduction and General Notes

1.1 Index Of Routes

1.2 Sectional Appendices and Rule Book

1.3 Definitions

1.3.1 Train Classification

Class 9	Amended 9Hxx and 9Txx to show which terminal they are going to.

2. Route Description

2.1 Planning Geography

GW103	At Paddington, amended station working note to show that Class 345s are prohibeted from platforms 6 and 7
	At Up Iver Loop added UDG to Up line code
GW105	Added 150 TIPLOC limit note to notes column at Bridgwater
GW182	Added Colnbrook Aggregates terminal to planning geography
GW225	Added notes to Reading Signals T1726 and T1728
GW500	Reading Signals T1726 and T1728 removed from LOR
GW660	Goss Moor Loop removed
GW834	S' added to code column at Cwmbach and Fernhill
GW900	Pencoed reverted to non-mandatory status
	Pencoed Up Passenger loop removed

	Stormy down loop and stormy up loop added back in
	Llanelli dock Jn East, added X to code column

2.2 Route Opening Hours

3. Electrification

4. Rolling Stock Restrictions

5. Running Times, Margins and Allowances

5.1 Sectional Running Times

5.2 Headways

GW610	Amended Crannaford to Pinhoe to be Feniton to Pinhoe and amended to AB+1
GW660	Headways amended due to Goss Moor Loop not being needed for June 24
GW710	Note removed
GW740	Headway between Ebbw Vale and Aberbeeg Jn have been amended with a note

5.3 Junction Margins and Station Planning Rules

Standard values	class 197 attach and detach values now show that it is for when 2 drivers are present
GW103	At Paddington, amended Station working rules for platforms 6 and 7 to show Class 345s are prohibited
	At Hanwell, added two new adjustments
	At Hayes and Harlington, added new planning note
	At Heathrow Airport Jn, added new Junction margin and removed part of signalling limitations note
GW105	At North Somerset Jn, amended one adjustment to state all in timing load vice passenger only.
GW108	At Par amended Adjustments and Junction margins
GW500	Fairwood Junction, Converging margin reworded
	Clink Road Junction, converging margin reworded
GW600	At Bristol Parkway, amended adjustment allowance wording
GW660	At St Blazey Signal box, removed 2 margins and updated note at another
	At Goonbarrow Junction, removed Junction margins and updated planning note
	Goss Moor Loop entry removed as not needed
	At Newquay, removed junction margin
GW730	At Hereford, added WMT turnround allowances
GW731	At Shrewsbury, added Dwell time for All WMT services
GW830	Amended 2 margins to make them 1 min vice 3. and added Cardiff central platform 8 to first moves
GW900	Pencoed adjustment allowance removed
GW900	Stormy entry removed
GW900	Margam Moors Jn adjustments reverted to V2.1 entries

5.4 Platform Lengths

5.4.1 Loop Lengths

GW660	Removed entry

5.5 Timing Allowances

GW103	Approaching Maidenhead now shows 345 in notes
GW200	Amended both entries to give more information
GW660	Removed Newquay entry

5.6 Watering of Steam Locomotives

6. Timetabling Considerations

6.1 Advertised and Working Times

6.2 Timing of Light Locomotives

6.3 Two Track Timetable Railway

These represent the revised Timetable Planning Rules (the "Draft Rules") for the Subsidiary June 2024 timetable in accordance with Part D of the Network Code, Condition D2.2.3.

As per Condition D2.2.4 of Part D of the Network Code, following distribution of the Draft Rules and by D-54, Timetable Participants may make representations to Network Rail in respect of any changes they propose or objections they may have to the Draft Rules provided to them in accordance with D2.2.3.

Final Principal and Preliminary Proposal for Subsidiary Change Timetable 2024

6th October 2023

OFFICIAL

Contents

OFFICIAL

1 Introduction and General Notes

Network Rail provide the Timetable Planning Rules document to Train Operators and other interested parties to set out the rules which are applicable to Access Requests for scheduling of train paths on the Network Rail network. Separate sections of Timetable Planning Rules are prepared for each Route with a National Timetable Planning Rules document setting out procedures to be followed and other nationally applicable rules.

Network Rail will determine the contents of Timetable Planning Rules through consultation with Train Operators with the primary aim of achieving the optimal balance between access to the network for train operations and performance robustness of the resulting train plan. This consultation is in line with the Network Code Part D, and Train Operators have a right of appeal to Timetabling Subcommittee against the contents of the Final Timetable Planning Rules.

Final Timetable Planning Rules are issued with timetable Access Request Information before the commencement of the development period for the Principal Change timetable to which the Rules apply and cover a 12–month period. Revised Timetable Planning Rules are issued with timetable Access Request Information before the commencement of the Subsidiary Change timetable development period and show changes applicable to the Subsidiary Change timetable period, which have been agreed since the issue of the annual Timetable Planning Rules.

Timetable Planning Rules may be changed only through this twice–yearly process or by the change procedure described in the National Timetable Planning Rules.

Train Operators' Access Requests for train paths must be compliant with Timetable Planning Rules. If a Train Operator wishes to submit an Access Request for a train path which is not compliant with Timetable Planning Rules, it should consult the Network Rail Capacity Planning team to establish whether an amendment to Timetable Planning Rules is likely to be agreed and, if appropriate, submit an amendment proposal which will be considered by Network Rail in accordance with the Change Procedure set out in the National Timetable Planning Rules. The Timetable Planning Rules amendment proposal should be submitted to Network Rail as early as possible and certainly no later than the time of submission of the Access Request. If the proposed change is likely to involve the calculation of new sectional running times or a physical investigation, then the Train Operator should liaise with the Capacity Planning team to establish a realistic timescale for evaluation of the proposed change before submission of the Access Request.

1.1 Index of Routes

Information arranged on a line of route basis in this document is presented in the following order:

GW103	Paddington to Uffington
GW105	Uffington to Fordgate via Box
GW107	Worle to Uphill via Weston–super–Mare
GW108	Fordgate to Penzance
GW110	Old Oak Common West to South Ruislip (excl.)
GW117	Greenford East Jn to Greenford South Jn
GW130	Acton Wells Junction to Acton East Jn
GW174	West Ealing to Greenford West Junction
GW175	Greenford South Jn to Greenford
GW176	Hanwell to Drayton Green
GW178	Southall to Brentford Goods
GW180	Heathrow Airport Junction to Heathrow Terminals 4 & 5
GW182	West Drayton to Colnbrook
GW184	Slough to Windsor & Eton
GW185	Maidenhead to Marlow
GW187	Twyford to Henley–on–Thames
GW190	Reading Spur Jn to Reading New Jn
GW200	Didcot to Heyford (excl.)
GW220	Oxford Road Jn to Reading West Jn
GW225	Reading Caversham Road Jn to Oxford Road Jn (Reading feeder lines)
GW240	Didcot East Jn to Didcot North Jn
GW250	Foxhall Jn to Didcot West Curve Jn
GW260	Kennington Junction to Cowley
GW310	Wolvercote Junction to Pershore (exclusive)
GW317	Honeybourne North Junction to Long Marston
GW401	Ashchurch (incl.) to Westerleigh Junction
GW425	Berkeley Road Junction to Sharpness
GW430	Yate Middle Junction to Tytherington
GW440	Yate South Junction to Westerleigh
GW450	Stoke Gifford Junction to Bristol East Junction
GW4501	Stoke Gifford Junction to Bristol Bulk Handling Terminal
GW451	Filton Junction to Filton West Junction (Filton Chord)
GW454	Severn Beach to Narroways Hill Junction
GW456	Lawrence Hill to Barrow Road RTS
GW480	Swindon to Standish Junction
GW490	Gloucester Yard Junction to Horton Road Junction
GW500	Reading to Cogload Junction via Westbury and Frome avoiding lines (Berks. and Hants line)
GW5001	Beechgrove GF to Westbury South Junction
GW510	Westbury North Junction to Bathampton Jn
GW520	Westbury East Loop Jn to Hawkeridge Jn
GW523	Thingley Jn to Bradford Junction
GW528	North Somerset Junction to Bristol West Junction *(Great Western Railway lease from Dec 2006)*
GW530	North Somerset Jn to Dr. Days Jn (“Rhubarb Loop”)
GW540	Filton Junction to Patchway Junction
GW5401	Filton West Junction to Patchway Junction (Patchway Chord)
GW548	Parson Street Junction to Portbury Terminals
GW560	Heywood Road Junction to Fairwood Junction via Westbury
GW570	Clink Road Junction to Blatchbridge Junction via Frome
GW572	Frome North Junction to Whatley Quarry

OFFICIAL

GW580	East Somerset Junction to Cranmore
GW600	Wootton Bassett Junction to Pilning
GW606	Cowley Bridge Junction to Barnstaple
GW608	Crediton to Meldon Quarry
GW610	Crannaford L.C. (incl.) to Exeter St. David's
GW611	Exmouth Jn to Exmouth
GW618	Newton Abbot East Junction to Heathfield
GW620	Newton Abbot West Junction to Goodrington C.S.
GW628	Laira Jn to Plymouth Friary SS via Speedway Jn
GW629	Laira Jn to Mount Gould Jn
GW630	Lipson Jn to Mount Gould Jn
GW637	St. Budeaux Junction to Gunnislake
GW640	Liskeard to Looe via Coombe
GW642	Coombe (excl.) to Moorswater
GW650	Lostwithiel to Carne Point, Fowey
GW660	Par to Newquay
GW672	Burngullow to Parkandillack
GW680	Penwithers Junction to Falmouth
GW690	St. Erth to St. Ives
GW700	Gloucester Barnwood Junction to Severn Tunnel Jn
GW710	Llanwern Steelworks East Connection to Llanwern Steelworks West Connection via Service Lines (Tata Steel infrastructure)
GW720	Fifoots Point Power Station to East Usk GF
GW730	Severn Bridge Jn to Newport Maindee West Jn
GW731	Abbey Foregate to Wrexham North Jn
GW732	Abbey Foregate Jn to English Bridge Jn
GW733	Sutton Bridge Junction to Aberystwyth
GW734	Dovey Junction to Pwllheli
GW735	Shrewsbury Crewe Junction to Gresty Lane
GW740	Maindee East Jn to Maindee North Jn
GW750	Hereford Brecon Curve GF to MEB Siding
GW770	Ebbw Vale Town to Gaer Junction
GW773	Machen Quarry to Park Junction
GW780	Park Jn to Ebbw Jn
GW784	Alexandra Dock Junction to 160 miles 27 chains (boundary with ABP Newport Docks)
GW790	Pengam Junction to 4m 54ch (ABP) Cardiff Docks
GW810	Rhymney to Queen Street North Junction
GW820	Cwmbargoed to Ystrad Mynach South
GW828	Coryton to Heath Junction
GW830	Merthyr Tydfil to Barry Island via Cardiff Queen Street
GW834	Hirwaun to Abercynon
GW835	Treherbert to Pontypridd Junction
GW839	Queen Street South Junction to Cardiff Bay
GW840	Radyr Junction to Cardiff Radyr Branch Junction via City Lines
GW850	Leckwith Loop North Jn to Leckwith Loop South Jn
GW860	Penarth Curve North Jn to Penarth Curve South Jn
GW864	Cogan Junction to Penarth
GW870	Barry to Bridgend Barry Junction (Vale of Glamorgan Line)
GW874	Bridgend Llynfi Junction to Maesteg
GW875	Tondu Junction to Garw Loop
GW877	Tondu to Port Talbot Docks (Ogmore Vale Extension Line)
GW890	Court Sart Junction/Briton Ferry West Junction to Morlais Junction (Swansea District Line)
GW8901	Dynevor Junction to Jersey Marine Junction South
GW892	Cwmgwrach to Burrows Sidings

OFFICIAL

GW893	Onllwyn to Neath and Brecon Junction
GW894	Jersey Marine Junction North to Jersey Marine Junction South
GW897	Grovesend Colliery Loop Junction to Hendy Junction
GW900	Pilning to Fishguard Harbour
GW9001	Landore Junction to Swansea
GW906	Swansea Loop East Junction to Swansea Loop West Junction
GW910	Craven Arms Junction to Llandeilo Junction (Central Wales Line)
GW915	Gwaun–cae–Gurwen to Pantyffynnon
GW930	Carmarthen Station to Carmarthen Junction
GW940	Carmarthen Station to Carmarthen Bridge Junction
GW950	Whitland to Pembroke Dock
GW960	Clarbeston Road to Milford Haven
GW970	Gulf Oil Branch Junction to Waterston Gulf Oil Refinery
GW980	Herbrandston Junction to Robeston Amoco Sidings
NW3001	Saltney Jn to Holyhead
NW3007	Wrexham Central to Neston
NW3015	Llandudno Junction to Blaenau Ffestiniog
NW3017	Llandudno Junction to Llandudno

1.2 Sectional Appendices and Rule Book

1.2.1 Sectional Appendix

The Sectional Appendix to the Working Timetable and Books of Rules and Regulations shall be used.

The Sectional Appendix is the sole source of information regarding the following:
Electrification limits refer to relevant Table 'A'
Permissive Working refer to relevant Table 'A', then see below.
Route Clearance refer to 'tab' associated with relevant Table 'A'

To identify the type of Permissive Working that applies at a given location refer to the appropriate Sectional Appendix Table A for that location. If there is authority for Permissive Working, this will appear in the Signalling and Remarks. There are different authorities that depend upon the signalling and layout of the location. The following list identifies the types of Permissive Working that will appear in the Sectional Appendix.

Type	**Description**
PP	Permissive Working – full use for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – A	Permissive Working – Attaching and Detaching use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – C	Permissive Working – Contingency use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – S	Permissive Working – Platform Sharing use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PF	Permissive Working for class 3 to 8 and 0 trains

Source: Sectional Appendix – General Instructions – National – Explanation of Table A terms and symbols

1.2.2 Rule Book

The following Modules of the Rule Book GE/RT8000 affects all sections unless specified. The sections listed affect railway operations and train movements. The listed section does not apply to Train Planning directly, but its application will affect how trains operate, and it is for that reason the item appears here.

RULE BOOK MODULE	**SECTION**	**NOTES**
G1 General safety responsibilities and personal track safety for non–track workers	5.5 Using the phonetic alphabet;	Operational principles
OTM Working of on–track machines (OTM	2.2 Before starting a journey	TPR Section 4.6
	5.6 Carrying out a running brake test	TPR Section 5.1.2
P1 Single line working	6.5 Warning anyone working on or near the line used for single line working	When planning Single Line Working
	9.3 Right–direction movements	
	9.4 Wrong–direction movements	
S1 Signals and indicators controlling train movements		Operational principles
S2 Observing and obeying fixed signals	3.1 Passenger train at a position–light, shunt–ahead or shunting signal	Operational principles
SP Speeds	2.4 Differential permissible speed indicators	TPR Section 5.1.2
	2.5 Permissible speed indicators with letters	TPR Section 5.1.2

OFFICIAL

RULE BOOK MODULE	SECTION	NOTES
	2.6 Enhanced permissible speed (EPS) indicators	TPR Section 5.1.2
T11 Movement of engineering trains and on–track plant under T3 arrangements	3 Movements entering the possession	When planning trains entering possessions
	7 Instructing the driver or machine controller	When planning trains entering possessions
TW1 Preparation and movement of trains General	7.1 Authority and arrangements for movements (Hauling dead traction units)	Operational principles
TW2 Preparation and movement of multiple–unit passenger trains	6.5 Carrying out a running brake test	TPR Section 5.1.2
TW3 Preparation and movement of locomotive hauled trains (including HSTs, push–pull, postal, parcels)	2.1 Locomotives running light or hauling trains (Maximum speed of);	TPR Section 5.1.2
	2.2 Maximum permitted speed of locomotive–hauled trains	TPR Section 5.1.2
	2.3 Electric–traction speed restrictions	TPR Section 5.1.2
	3.16 Carrying out a running brake test	TPR Section 5.1.2
	Section 14.1 Working trains with locomotives at both ends, when this type of working is permitted	Operational principles
Rule Book Handbook 5 Handsignalling Duties	Section 5.2 Entrance signal	When planning Temporary Block Working (TBW)
	5.3 Exit signal	When planning Temporary Block Working (TBW)
	5.4 Where TBW is divided into two sections	When planning Temporary Block Working (TBW)

1.3 Definitions

The list below is not an exhaustive one but is intended to give readers an understanding of some of the terminology as used for the purposes of this document.

If any term in Timetable Planning Rules is unclear please contact the compiler on the telephone number shown on the cover.

1.3.1 Train Classification

Classification	Description
1	Express passenger train; or Nominated postal or parcels train; or Breakdown or overhead line equipment train going to clear the line or returning from there (1Z99); or Traction unit going to assist a failed train (1Z99) Snow plough going to clear the line (1Z99)
9	A train formed of a Class 373 unit or other passenger train if specially authorised Elizabeth Line Services via the COS
2	Ordinary passenger train; or Breakdown or overhead line equipment train not going to clear the line (2Z99) Officers' special train (2Z01)
3	Freight train which can run at more than 75 mph; or A parcels train; or Priority Empty coaching stock; or a Network Rail Infrastructure Monitoring Train (3Qxx)
4	Freight train which can run up to 75 mph
5	Empty coaching stock train
6	Freight train which can run up to 60 mph
7	Freight train which can run up to 45 mph
8	Freight train which can run at, or is timed to run at, 35 mph or less
0	Light locomotive or locomotives

1.3.2 Days of Operation

The following abbreviations are used to identify the day or days that a train operates.

Abbreviation	Description
M	Monday
T	Tuesday
W	Wednesday
Th	Thursday
F	Friday
S	Saturday
Su	Sunday
EWD	Every Week Day (Monday to Saturday)
Daily	Every day – Integrated Train Planning System (ITPS) will not accept this; there must be a separate entry for Sundays.
Suffixes	
O	Adding this indicates that the train will run only on that day or those days shown
X	Adding this indicates that the train will not run on that day or those days shown
General	
BHX	Denotes that this train does not run on a bank holiday

1.3.3 Traction and Rolling Stock

Abbreviation	Description
15X	DMU classes 150/153/155/156/158/159
17X	DMU classes 170/171/172 and 175
197	DMU Class 197
22X	DMU classes 220/221/222
230	DMU Class 230
231	DMU Class 231
769	Bi-mode class 769
80X	Bi-mode classes 800/802
Castle	“Mini HST” GWR 2+4 HST (HSTGW4)
DMU	Any diesel multiple unit (incl. GWR Castle Class (HST) & 769 in diesel mode) (excluding classes 180/22X)
EMU	Any electric multiple unit (incl. 769 in electric mode)
ECS	Empty Coaching Stock includes empty diesel and electric multiple units.
HST	Trains consisting of two Class 43 locomotives and Mk 3 passenger vehicles (except for GWR (HST) Castle class)
LH	A passenger or parcels train hauled or propelled by one or more locomotives
LHCV	Locomotive hauled coaching vehicles
Power	Passenger stock equipped with power operated external doors
Power Door DMU	Class 150, 153, 156, 158, 159, 165, 166, 168, 170, 171, 172, 175, 180, 220, 221, 222

OFFICIAL

1.3.4 Line Codes

Abbreviation	Description
-	Default Line Code as indicated in Section 2.1
1	Line 1
2	Line 2
3	Line 3
4	Line 4
5	Line 5
6	Line 6
A	Line A
AB	Line A to Line B
B	Line B
BAY	Bay Line
C	Line C
CL	Carriage Line
D	Line D
DB	Down Bletchley
DBL	Down Bromsgrove Loop
DF	Down Frome
DFR	Down Feeder Relief (Reading)
DGL	Down Goods Line
DH	Down Airport (Heathrow Airport Jn to T2&3 and Down T5, Heathrow T2&3 to Heathrow T5 (both for Up direction working)) Down Holyhead (for reversible running)
DHR	Down Airport Relief (Stockley Jn 8210 points) to Heathrow Tunnel Jn (for Up direction working)
DJ	Down Jericho (Oxford)
DK	Down Kemble
DL	Down Line/Loop
DM or DML	Down Main
DNL	Down Newbury Loop
DOX	Down Oxford
DPL	Down Passenger Line/Loop
DRL	Down Relief Line
DT	Down Tunnel
DW	Down Westbury
DWL	Down Westbury Line
E	Line E
ECL	Engine & Carriage Line
FVL	Festival Line (Reading)
GL	Goods Line
ML	Main Line
RCL	Reception Line
RL	Relief Line
RL1	Reception Line 1
RL2	Reception Line 2
RVL	Reversible Line
TL	Through Line
UB	Up Bletchley
UDR	Up and Down Relief
UF	Up Frome
UFM	Up Feeder Main (Reading)
UGL	Up Goods Line

OFFICIAL

UH	Up Airport (Up T5, Heathrow T5 to T2&3 and Up Airport Heathrow T2&3 to Heathrow Tunnel Jn (both for Down direction working) Up Holyhead (for reversible working)
UK	Up Kemble
UL	Up Line
UM or UML	Up Main
UOX	Up Oxford
UPL	Up Passenger Loop/Line
UR	Up Reception
URL	Up Relief Line (including Up Airport Relief Heathrow Airport Jn to Stockley Jn 8211 points for Down direction working)
UT	Up Through/Tunnel
UWC	Up West Curve
WDL	West Drayton Loop
WL	Westbury Line

1.3.5 Activity and Other Codes

Abbreviation	Description
–D	Train stops to detach vehicles
–T	Train stops to attach and detach vehicles
–U	Train stops to attach vehicles
A	Train stops or shunts for other trains ahead or to pass only. Shows as an * in WTT
AE	Trains stops to attach/detach assisting locomotive.
BL	Train stops to attach or detach a banking locomotive
C	Train stops to change train crew
D	Train only stops to set down passengers. Shows as an s in NRT
E	Train stops for examination
G	NRT data to add
H	Notional Activity to prevent WTT column merge
HH	As H, were there is a third column involved
K	Passenger count point
KC	Ticket collection and examination point
KE	Ticket examination point
KF	Ticket examination point – 1st Class only
KS	Selective ticket examination point
L	Train stops to change locomotives
N	Stop not advertised to the public
OP	Train stops for other operating reasons
OR	Train locomotive on rear of train
PR	Train propelling between points shown
R	Train stops when required. Shows as an x in NRT
RM	Trains stops for a reversing movement or driver to change ends
RR	Train stops to allow the locomotive to run–round its train
S	Trains for railway personnel only
T	Trains stops to pick up or set down passengers
TB	Train begins (Origin)
TF	Train finishes (Destination)
TS	Detail consist for TOPS Direct requested by DB Cargo
TW	Train stops to pick up or set down a staff, tablet or token on Single Lines. See Section 5.2
U	Train only stops to pick up passengers. Shows as a u in NRT
W	Train stops for watering of coaches
X	Train passes another train at crossing point on single line. See Section 5.2

Activity Codes – Notes
1. Any passenger train that stops at a location automatically generates a T Activity unless it is suppressed.
2. If an Activity is required that removes the 'passenger stop' Activity (T, D, U and R), then the 'passenger stop' Activity must always appear in the first Activity field (e.g. T –D would be correct, –D T would not). This is because the National Rail Timetable (NRT) extract program only considers the first Activity field. If it does not find a 'passenger stop' Activity in the first field the time will not be extracted to appear in the NRT.
3. Up to 6 Activities may be shown for each event.
4. No two Activities may be duplicated at the same event.
At any one event, the following groups are mutually exclusive: a) D, U, T, N, S, TW, OP. b) –D, –U, –T. c) TB, TF. d) KC, KE.
6. N, R, G, D and U are only valid with Train Categories XC, XD, XI, XX, XZ, OO, OW, OL, BS, BR and blank (i.e. 'advertised' services). R, D and U are additionally valid with Train Categories XU and OU (unadvertised services).
7. K, KC, KE, KF, KS are only valid with Train Categories starting X or O.
8. If TF is present then none of K, KC, KE, KF, KS can be present.
9. Activity T indicates that a train stops to pick up and set down. This normally refers to passengers. Activity –T indicates that the train stops to attach and detach vehicles. At any location where a 'stop' time is shown, TPS or a similar system will assume a default Activity is required unless otherwise specified. These default Activities are as follows: T for trains with a Train Category starting in X or O, OP for trains with a Train Category starting in Z or E, and –T for all other trains (but see below). The default Activity will be generated when the upload file is created.
10. If Activities U, D, N, R, OP, S, TW, –U or –D are specified then this overrides the defaults and only the specified Activities will be included in the upload file.

2 Route Description

2.1 Planning Geography

Network Rail maintains the planning geography and issues it to Train Operators using the BPlan system. BPlan data is to be regarded as the master geography and it is the responsibility of Train Operators and nominated Network Rail users to ensure that data in their train planning systems reflects the master geography.

It is essential that all locations, times and full details such as platforms, running lines, activities, etc. comply fully with all of the following rules. Any Network Links used for buses only are to have running line defined as BUS. All data used by a specifier must be that supplied by Network Rail: use of estimated times added or amended locally will cause the trains concerned to fail validation.

In order to avoid the creation of unnecessary journey legs and associated point–to–point timings, all passing times must conform to these rules.

Locations in bold **type and underlined** are mandatory timing points i.e. apply to all trains on the specified line of route.

Locations in **bold** type are conditional timing points with a mandatory element. These are locations where all trains travelling on a specific line or in a specific direction are required to be timed at this location, which will be defined in the Notes column. For lines/directions for which the mandatory element does not apply they are to be treated as non-mandatory timing points and are only required to be shown in connection with a specific activity with one or more of the codes shown below in the Code column.

Locations in normal type are non-mandatory timing points and are required to be shown only for a specific activity with one or more of the codes shown below in the Code column.

Locations in *italic* type are not timing points but are shown for reference purposes.

Line references shown in italics e.g. *SW100* are only for reference purposes.

In the tables below, the following codes apply:

F	Only freight trains are timed here
P	Only passenger trains are timed here
S	Only stopping trains are timed here
X	Only trains crossing from one running line to another are timed here

GW103 PADDINGTON TO UFFINGTON				
TIMING POINT	**DOWN**	**UP**	**CODE**	**NOTES**

2.2 Route Opening Hours

Subject to constraints imposed by the Engineering Access Statement all routes are open continuously, except as shown below. The hours shown reflect the contractual opening hours. The actual opening hours may vary from those shown. For a complete listing of current signal box opening hours please refer to the "Compendium of Signal Box Opening Hours" under the "Operational Rules" section which can be found on the Network Rail website - https://www.networkrail.co.uk/industry-and-commercial/information-for-operators/ If there is doubt about a signal box's opening hours check with the appropriate Network Rail Operations Manager.

When the routes shown are required for services diverted under the Engineering Access Statement opening hours will be increased as necessary on a temporary basis.

Signal boxes equipped to be switched–out during a route's opening hours are shown within the routes concerned.

PLT denotes passage of last train.

GW103 PADDINGTON TO UFFINGTON
Note: Acton Canal Wharf Signal Box is closed between 07:00 and 19:00 hrs on Sundays. The following routes are not available during these periods: Trains linking with the West Coast Main line via EA1310, EA1360 and MD170 (via Acton Canal Wharf Junction cannot run during this period; Links to the Midland Mainline in both directions via EA1310 and EA1360 to and from both Brent Curve Junction and Cricklewood Junction are also unavailable at the same time).

3 Electrification

3.1 Electrification Limits

Limits of the 25 kV AC and 750V DC electrification systems are contained in Table A of the Sectional Appendix to the Working Timetables, issued by, Network Rail. Refer to Table A for the given location to identify the type of electrification that applies.

3.2 Electrification Supply Restrictions

Under normal conditions, the electrification power supplies will not place any restrictions on the use of approved electric traction. However, the Route Clearance sections of the Sectional Appendix to the Working Timetables, issued by, Network Rail do tabulate restrictions on the movement of electric trains. Refer to Table A and select Route Clearance.

Under maintenance conditions, certain sections of the electrified network may be blocked to electric traction. These restrictions are contained within the Network Rail Engineering Access Statement for the appropriate year. Additional restrictions may also arise in connection with engineering possessions requested through the Engineering Access Statement amendment procedure.

4 Rolling Stock Restrictions

4.1 Locomotive Route Availability

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

4.2 Passenger Stock Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

4.3 Freight Wagon Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. The Route Availability for a given location is in the 'Signalling and Remarks' column of Table A. Route Clearance Table D5 Route clearance of freight vehicles gives further guidance on freight wagon restrictions.

Trains conveying vehicles that have a heavy axle weight or other exceptional characteristics, or vehicles conveying containers or swap bodies require an RT3973 form.

Note: The Rule Book GERT8000 Section TW4 of defines a container as an intermodal transport unit constructed to a standard (usually specified by the ISO) suitable for conveyance by road, rail or sea.

Note: The Sectional Appendix does not cover the CTRL HS1. The CTRL has its own Working Manual.

4.4 Freight Train Load Limits

Trailing load limits for all traction types are contained in the Freight Loads Book published by Network Rail.

Note: It is important to understand the weight limitations that apply to trains especially over sections of heavily graded routes. Coupling strength information is also contained in the i). Coupling strength is important in determining the trailing loads that trains can convey.

4.5 Freight Train Length Limits

Refer to the Freight Train Loads Book published by Network Rail for the length limits of freight trains.

Note: The Sectional Appendix quotes loop lengths in metres and feet. These are the absolute lengths of the loop from the signal at the outlet to the fouling point at the entrance to the loop.

4.6 Engineers' Trains Restrictions

Some On Track Machines (OTMs) do not reliably activate track circuits. These OTMs must use one of the following special reporting numbers 6Z09, 7Z09 or 8Z09*. Because these OTMs do not reliably activate track circuits it is not possible to apply the headways and junction margins as outlined in Timetable Planning Rules consistently and it is therefore not possible for Capacity Planning to provide timings for these movements.
* *Source GE/RT 8000–OTM*

5 Running Times, Margins and Allowances

Except where otherwise stated, the information in this section of the Timetable Planning Rules reflects the general rules used in developing the 1994/5 timetable (Several exceptions to the general rules were agreed for 1994/5 and exceptions may continue to be possible with the specific agreement of Network Rail in every case.)

5.1 Sectional Running Times

The definition for Sectional Running Times (SRTs) is listed in Section 6.4 of the National TPRs.

5.1.1 Source of Current SRTs

The definitive catalogue of SRTs is BPlan.

5.1.2 Method of Calculation

SRTs are revised by Train Operators and Network Rail as part of the Revision of Timetable Planning Rules process outlined in Network Code Part D 2.2. Normally they will not change from one timetable to the next. Network Rail will, however, re–calculate SRTs for particular train/route combinations in the following circumstances:

i) Where a Train Operator anticipates using a train/route combination for which no suitable SRTs exist;
ii) Where Network Rail anticipates a change to route data, e.g. line speed changes;
iii) Where there is evidence that the SRTs in current use do not adequately represent real train performance;
iv) Where it is cost–effective to re–calculate all SRTs on a route at the same time as a re–calculation for a particular train type.

Network Rail will reflect the methodology and assumptions described in Section 6 of the National TPRs when calculating TPR proposals, unless and to the extent documented otherwise in respect of any given proposal. Timetable participants are encouraged to submit change proposals for review and consultation in line with the national methodology, or in line with such alternative methodology and assumptions as favoured by the proposer. NR will not seek to reject any proposal on the exclusive basis of the methodology employed, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

SRT change proposals may be calculated in a number of ways including, but not limited to:

a) Through actual timing of trains
b) Use of On Train Monitoring Recorder (OTMR) systems
c) Use of computer system actual values
d) Use of computer simulation tools
e) By any other agreed methodology

It is permissible to include percentage uplift in SRTs instead of applying engineering recovery allowances to be agreed by all affected parties.

In the event that the application of different methodologies produces conflicting proposals, a joint observation exercise should be undertaken to ascertain what happens in reality.

5.1.3 New and Revised Sectional Running Times

New and revised SRTs are revised by Train Operators and Network Rail on an individual basis. These should be supplied by applying the methodology described in Section 6 of the National TPRs unless another methodology is deemed appropriate, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

5.1.4 Timing of Trains Consisting of Passenger Vehicles on Goods Lines

The sectional running timings quoted for trains consisting of passenger vehicles on Goods Lines reflect the speeds shown in the relevant Table 'A' of the appropriate Sectional Appendix. They do not constitute an authority to time trains conveying passengers on a Goods Lines. Nor do they reflect the permitted speeds at which a train conveying passengers can proceed. Network Rail will offer the sectional running times for trains conveying passengers on a Goods Line on a train–by–train basis. For those times please apply to Capacity Planning.

Operations Publications publish the authority to allow the planned operation of trains conveying passengers on Goods Lines. Before Operations Publications can grant authority they require confirmation that the track is fit for purpose and that there is a safe method of operation. Therefore Capacity Planning must apply to the relevant Track Engineer and Operations Manager for confirmation of these requirements in writing. Capacity Planning must pass these responses to Operations Publications. Capacity Planning is responsible for advising Operations Publications of the requirement to operate a passenger train on a Goods Line at least 8 weeks before the day of operation.

OFFICIAL

5.2 Headways

The definition for Headways is listed in Section 6.5 of the National TPRs.

5.2.1 Headway Values

All times are in minutes. All routes are shown.

Where track circuit block (TCB) signalling applies, the standard headways for each route are shown, together with any exceptions.
AB indicates locations where absolute block signalling applies. Here the headway is to be calculated from the transit time of the first of each pair of trains running between the stated timing points. A value "x" shall be added to the transit time to allow for the signaller's actions and sighting of the relevant signal. The planning headway is shown as "AB+x".

AB methodology may also be used to express the headway in TCB areas, the value "x" including the time taken to reset the route, clear the signal on entry to the section and sight the signal. Where there is an intermediate block signal, the absolute block section concerned shall be between this signal and the next block post in advance.

Single lines and other forms of signalling are shown, together with any values applicable, where they occur.

'OTNS' or 'OT' indicates One Train Working with No Train Staff; 'OTS' or 'OT(S)' indicates One Train Working with Train Staff. 'NST' indicates No Signaller token. In these cases only one train is allowed in the section at one time; a second train cannot be allowed to enter the section until the first train has left the section.

'ETB' indicates Electric Token Block, and 'TB' indicates Tokenless Block for single lines.

'RB' indicates Radio Signalling where 'Long Section Tokens' can be issued between certain block posts during times of low traffic volume.
Light Engine movements, postal and test trains to be treated as passenger trains when applying margins/allowances where there is a freight/passenger difference.

Details of how to apply headways are listed in the National TPRs Section 1.5.5.

REDUCED HEADWAY FOR A TRAIN FOLLOWING FROM A STAND			
Route Section	Margin		
First train speed passing the loop	50 – 55 mph	60 – 95 mph	100 – 125 mph
Headway			
2	1.5	1.5	1.0
3	2.5	2.0	1.5
4	3.0	2.5	2.0
5	4.0	3.0	2.5
6	4.5	4.0	3.0
7	5.5	4.5	3.5
8	6.0	5.0	4.0
9	7.0	5.5	4.5
10	7.5	6.0	5.0
Note this does not apply in absolute block areas.			
Note the normal headway applies at the next mandatory timing point.			
Note this shall not apply where the preceding train has an intermediate calling point before the next mandatory timing point.

Llandudno Junction to Deganwy	AB+2	AB+2	
Deganwy to Llandudno	AB+2	AB+2	

5.2.2 General Capacity Constraints

Where single line working is to operate or trains are to be routed to run on a line other than that normally planned for them, constraints on capacity will apply – see Engineering Access Statement.

The following special capacity and timing restrictions apply in addition to the constraints stated elsewhere in this document:

Network Rail intends to restrict planned usage to 90% of capacity, according to the following criteria:

(a) Headways used are strict minimum headways.

(b) Period of time measured is a minimum of half an hour.

(c) Capacity is measured over a signal block section, through a junction, through a platform or on a single line section.

EXCEPTIONS :-

(i) Where usage already exceeds 90% capacity, businesses will be permitted to retain existing paths but will be encouraged to move trains away from the critical period where there are acceptable cost/customer considerations. If a business relinquishes a path in the critical period, other businesses would not be able to re- occupy the path (see ii).

(ii) If a business wishes to run an additional train/s in the critical period, that request will be tabled for discussion. Normally, additional trains that breach the 90% level will not be accepted, but in exceptional circumstances it may be agreed provided all parties acknowledge the performance risks.

These restrictions will apply on the following route sections :-

GW103 PADDINGTON TO UFFINGTON
Between Paddington and Reading in both directions.

GW105 UFFINGTON TO FORDGATE VIA BOX
Between Bathampton Jn and Bristol Temple Meads in both directions.

GW900 PILNING TO FISHGUARD HARBOUR
Between Pilning and Severn Tunnel Junction.

NW3001 SALTNEY JUNCTION TO HOLYHEAD
Steam Hauled services must be timed over Conwy Tubular Bridge 30 minutes prior to a booked service to allow a full inspection of the structure to take place prior to the passage of the next booked service.

5.3 Junction Margins and Station Planning Rules

The definition for Junction Margins and Station Planning Rules is listed in Section 6.6 - 6.10 of the National TPRs.

All times shown are in minutes. Where adjustments to sectional running times are shown, the value must be added to the normal SRTs shown in B Plan. Negative adjustments are specially identified.

Minimum station allowances are the minimum practical for the particular type of stock. These are shown with exceptions being listed by line of route where applicable.

Light Engine movements, postal and test trains to be treated as passenger trains when applying margins/ allowances where there is a freight/ passenger difference.

STANDARD VALUES – MINIMUM	
Adjustment to Sectional Running Times A ½ minute adjustment should be included in all trains* approaching the termination point, where otherwise the terminating time would include an odd half-minute. *Except at London Paddington to allow trains to run at 2½ minute headways if required, and except at Twyford and Henley (for self-contained Henley Branch services ONLY), to enable a half-hourly service frequency. **Brake Testing** Great Western Railway 80X services require a {½}-minute running brake test allowance to be included in each schedule timed using 802-E or 802-D timing loads, at the first practical opportunity that a running speed of 40mph or higher is achievable, or prior to the first stop (whichever occurs first.) This is a mandatory allowance, to apply at the start of each journey, after any driver change, change to train formation or any reversal en-route. It is not to be applied during local shunt moves or ECS moves on/off depots. Where doubt exists, please request advice from the Train Operator	
Trains originating on whole minutes CrossCountry* and Freight^ schedules must depart from origin on a whole minute. (This is due to limitations with IT system requirements – *Integrale, ^TOPS)

Junction Margin – NW routes		
First Movement	**Second Movement**	**Margin**
Arrival	Conflicting departure	1
Departure	Conflicting arrival	3
All other conflicting movements, except: Where second move is a crossing move		3 2

Junction Margin – GW routes

Allowances are shown in a matrix giving the time required for the second train to cross after the first train using a junction on a conflicting move has passed, unless otherwise stated in 5.3. Elements used in the construction of the margin are signal spacing, junction resetting time and speed of the junction turnout (see table below).
Note: if first train is a pass/arrive and second train a conflicting departure, 1 minute may be applied as per platform end margins (when trains are travelling in opposite directions).

STANDARD VALUES - MINIMUM

170	5					
1 x 22x	15					
2 x 22x	20					
By exception, allowances for 'Train Preparation' (above) may be reduced after discussion and agreement between CrossCountry and Network Rail						
CrossCountry 22x Safety Check Unit (SCU) Allowances – minimum platform standing allowance between passenger train arrival and ECS <u>departure to depot</u>						
1 x 22x departing in same direction as arrival	8					
1 x 22x departing in reverse direction to arrival	10					
2 x 22x departing in same direction as arrival	15					
2 x 22x departing in reverse direction to arrival	20					
Pathing Rule – GW routes						
Where pathing time of more than 2 minutes is unavoidably imposed between stopping points due to conflict at a junction a restart allowance must be inserted in the timing section after the conflict point as shown in the table below. Note:- Pathing time must not be applied approaching ARS controlled junctions where a restart allowance would be incurred as it will be ignored by ARS. This causes the route to be set too early creating delay to any preceding train planned ahead on minimum junction margin. Any pathing required should be inserted at the preceding dwell point.						
	Restart allowance in minutes					
Line Speed	**< 80 mph**	**80 mph**	**90 mph**	**100 mph**	**110 mph**	**125 mph**

DMU/EMU	4
New Measurement Train	7
DVT	8* Only applies to services operating in DVT mode. * can be reduced to 5 if a change of traincrew is involved
Freight Train Crew Change Allowance	2
Turnround Allowances in General – GW routes	
At each stage of timetable development, turnrounds will not be planned for a shorter time than the minimum times shown here unless agreed by the Network Rail Operational Planning Project Manager and appropriate Business Manager. Where an Operator wishes to specify a turnround at a location where no minimum is specified in this document, this shall be subject to the agreement of the Route Operational Planning Manager and appropriate Business Manager	
Turnround Allowances On Branch Lines – GW routes	
The turnround margins at either end of the branches listed below must be a minimum of 3 minutes. In the branch working however there must be no more than three consecutive 3-minute turnrounds. • Falmouth Branch • Gunnislake Branch • Looe Branch • Severn Beach Branch • St. Ives Branch • Maesteg Branch	
Turnround – NW routes	
Minimum Turnround	10
LH	15 For new services, a turnround time of 10 minutes per hour of journey time should be taken as a guide.
MU	4 But no more than 3 successive 4 minutes turnrounds followed by an additional 10 minutes.(10 minutes applies to diagrams and not stations) For new services, a turnround time of 10 minutes per hour of journey time should be taken as a guide.
Avanti West Coast Services	60 At Holyhead (for Class 390) 30 At Holyhead (other than class 390) 20 At all locations for train entering passenger service after an ECS move or an ECS move following a train leaving passenger service.

THE FOLLOWING PAGES SHOW THE EXCEPTIONS TO THESE STANDARD VALUES

GW103 PADDINGTON TO UFFINGTON

Paddington

Connectional Allowance	15

Adjustment to Sectional Running Time (to be shown on the approach to Paddington)

Movement	Reason	Timing Load	Value
Trains that are planned to enter a platform that is already occupied		All traffic	+ {1}

Pathing approaching Paddington

Pathing time must not be applied approaching Paddington, when providing a margin with a conflicting departure. ARS will not read the pathing time, and a conflict will be created. Pathing time should be inserted approaching Royal Oak Jn to achieve such a margin.

Platform End Conflict Margins

First Movement	Second Movement	Margin
Arrival	Conflicting Departure	1
Departure	Conflicting Arrival	4 – giving a margin of 2 minutes at Royal Oak Jn

Paddington Terminal Allowances: -

Inbound train (In passenger service)	Margin before departure to Depot
80x (9/10 car)	10 minutes
80X (5 car)	7 minutes
L/H	15 minutes
DMU	5 minutes
EMU	5 minutes #

7 minutes for an 8 or 9 car EMU unless a replacement driver is provided.

Inbound train Depot	Margin before departure from Paddington (in passenger service)
80x (9/10 car)	15 minutes $
80x (5 car)	10 minutes
L/H	15 minutes
DMU	10 minutes
EMU	5 minutes #

7 minutes for an 8 or 9 car EMU unless a replacement driver is provided.

$ Can be reduced to 10 minutes on agreement with GWR

The above minimum times are acceptable to Network Rail; individual Train Operating Companies may require longer periods to achieve commercial objectives, subject to a maximum of 45 minutes at peak times & 60 minutes at off peak times. These maximum times may not be exceeded unless agreed to in writing by the Network Rail Operational Planning Project Manager.
Peak times at Paddington are defined as 07.30 to 11.00 and 16.00 to 19.30 Mondays to Fridays.
Note: These maximum times do not apply to Sleeper services to & from Penzance.

Minimum Turnround

4 minutes permitted with a change of Driver

§ Can be reduced to 5 minutes for a 4 or 5 car train or for an 8 or 9 car train with a change of driver

Platform Re-occupation

Platforms 1 to 11 inclusive	5 (Can be reduced to 4 by agreement from OPPM)
Platforms 12 & 14	4

Two DMU, 80x-5 or electric trains arriving in the same platform must be timed to arrive four minutes or more apart except when both trains are booked to run relief line from west of Ealing Broadway the minimum space between arrival of the first and second trains may be reduced to three minutes.

When two DMU, 80x 5 car DOO or electric trains are booked to depart from the same platform in the same direction the second **must** not be timed to depart less than five minutes after the first train to enable DOO procedure to be carried out; see, also, section 5.4.6. If the second train forms an empty working this minimum may be reduced to four minutes.

Number of Turbo cars-Length of Inner train when a second train to be admitted to same platform

Platform 1		7 cars		
Platform 2		7 cars		
Platform 3		7 cars		
Platform 4		6 cars		
Platform 5		6 cars

Platform 10		7 cars		
Platform 11		7 cars		
Platform 12		3 cars		
Platform 14		3 cars		

Station Working Rules

All Platforms: Trains reversing in Paddington Station must have different T.I.D.s for the inward & outward movements to or from the station. Note: A.R.S. (Automatic Route Setting) will not route trains attempting to reverse in Paddington using the same T.I.D.

Platforms 6 and 7 are intended primarily for use by Heathrow Express and the use of these platforms by other stock is restricted to rights under Access Agreements. Class 345s are prohibited from Platforms 6 and 7.

Platforms 4 and 5: It is prohibited for two class 80x units to attach, detach or platform-share in platform 4 and 5 at Paddington due to insufficient length and SPAD risk.

Royal Oak Sidings, Paddington
ARS assumes Siding 1 for up trains if vacant
Stabling of trains at Royal Oak has not been practiced for several years, due to environmental complaints from the local authority. In view of the sensitivity of the noise pollution issue, the planned use of Royal Oak for stabling of trains is considered most undesirable. Any Train Operator considering such use **must**, therefore, consult with Network Rail before submitting a bid. Royal Oak Sidings are available in an emergency, subject to driver compliance with noise abatement, as detailed in the Sectional Appendix. This does not apply to electric trains. Bi mode trains must be AC mode only.

Royal Oak Junction
A margin of 2 minutes applies to conflicting moves

Portobello Jn
Signalling Limitations
Trains from the Crossrail Central Operating Section may contain no more than {½} approaching Portobello Jn as there are no intermediate CBTC/signal berths after passing or departing from Westbourne Park CS
Simultaneous Moves Not Permitted
Consecutive Down trains from Portobello Jn via Lines 3, 4 or 5 which converge towards the Down Relief at Ladbroke Grove must also have headway applied at Portobello Jn.

Ladbroke Grove

Junction Margin *(applies for moves to and from the Carriage Lines via 8096 and or 8097 points)*

First Movement	Second Movement	Margin
Up train passing Ladbroke Grove	Down train to Carriage Lines	2
Down train towards Old Oak Common	Up train passing Ladbroke Grove	3
Up train passing Ladbroke Grove	Up train from Carriage Lines	2

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Crossing from ML to RL at Acton West in the Up direction Pass to Pass	Slower crossing speed for passenger trains running at over 90 mph	HST / 180 / 220/1 / 150 – 165/6 / 332	+{½}

Simultaneous Moves Not Permitted

Consecutive Up trains towards Portobello Jn via Crossrail Depot Line 1 and Line 6, which conflict at Portobello Jn, must also have headway applied at Ladbroke Grove

North Pole IEP Depot
Depot Acceptance
Trains arriving at this location must be timed 10 minutes apart. - Use of adjustment allowances between North Pole and Ladbroke Grove (either direction) is permitted for the purpose of maintaining 10-min depot intervals and optimising pathing at Ladbroke Grove, provided no schedule conflicts are created
Trains departing this location must be timed 10 minutes apart.

Old Oak Common East Jn

Junction Margins

First Movement	Second Movement	Margin

Down train pass Old Oak Common East Jn from Carriage Line or Engine Siding towards Down Relief	Up train pass Ladbroke Grove on Up Relief	4½*
Up train pass Ladbroke Grove on Up Relief	Down train pass Old Oak Common East Jn from Carriage Line or Engine Siding towards Down Relief	1½*

Planning Note

Trains planned to cross at Old Oak Common East towards the Down Relief should include a 'dot stop' at Old Oak Common East Jn, if they do not already stop there and do not stop again prior to Southall. This is to enable correct regulation in ARS. Any such trains can be treated as passing Old Oak Common East Jn for the purposes of the above junction margins.

Acton Main Line

NB: trains from Acton Wells Jn to the Down Goods that are booked to change traincrew at Acton Main Line stop adjacent to SN182 signal on the Down Goods. It is not possible to route a second down train from Acton Wells Jn towards the Down Goods or Down Relief or Acton TC until the first train has drawn forward to SN197 signal at Acton West.

Acton West

Adjustments to Sectional Running Times

Movement	Reason	Value
Down passenger Pass from RL to ML (not stopping at Acton Main Line or Ealing Broadway)	Slow speed junction	½ approaching next timing point

Planning Note

No adjustment time is required for freight to/from GL as this is included in the Acton West-West Ealing SRT.

Junction Margins

First Movement	Second Movement	Margin
Down Pass on RL	Down Class 0,1,2,3,5 or 9 Pass from Acton Yard or Goods Lines to RL	3½
Down Pass on RL	Down Class 4,6,7 or 8 Pass from Acton Yard or Goods Lines to RL	4½
Down Pass from Acton Yard or Goods Line	Down Pass on RL	3

Pass/arrive platform 4 from Drayton Green	Pass/depart to Drayton Green	2*
Arrive platform 5	Pass/depart to Drayton Green	1

*Increase to 3 if first movement is freight

Hanwell

Adjustments to Sectional Running Times

Movement	Reason	Value
Pass Hanwell from Hanwell Bridge Loop towards Drayton Green	Slow Crossover	{1}
Pass Hanwell from Hanwell Bridge Loop towards to West Ealing Loop	Slow Crossover	{1}

Junction margin

First Movement	Second Movement	Margin
Down Arrive/Pass from Drayton Green or West Ealing Loop	Up Pass/Arrive West Ealing on Up Relief (not stopping or crossing at Hanwell)	3
Down Arrive/Pass from Drayton Green or West Ealing Loop	Up Arrive/Pass on Up Relief	2½
Up Pass/Depart on Up Relief	Down Arrive/Pass from Drayton Green or West Ealing Loop	2½
Up pass/Arrive West Ealing on Up Relief (not stopping or crossing at Hanwell	Down Arrive/Pass from Drayton Green or West Ealing Loop	1½*
Down Pass to Hanwell Bridge Goods Loop	Up Pass/Arrive West Ealing on Up Relief (not stopping or crossing at Hanwell)	4½
Down Pass to Hanwell Bridge Goods Loop	Up Pass/Arrive on Up Relief	4
Up Pass/Arrive on Up Relief	Down Pass to Hanwell Bridge Goods Loop	2^
Up Pass/Arrive West Ealing on Up Relief (not stopping or crossing at Hanwell)	Down Pass to Hanwell Bridge Goods Loop	1^

*If the first train is 280m or less and has pathing time approaching West Ealing, the junction margin can be reduced by the value of the pathing time.

^ Can be reduced by 1 minute if second train has minimum 1 minute pathing time approaching Hanwell

Southall East Jn

Signalling Limitations

It is not possible to add pathing time in the up direction between Southall and Southall East Jn to trains timed ML, DML or GL as there are no intermediate signals. Pathing time must be added approaching Southall, or in the case of trains timed GL, with extended dwell time at Southall		
Crossing and conflicting moves		
First Movement	**Second Movement**	**Margin**
Passing Southall East Jn crossing to the Down Main, SWL or DBL at Southall from the Down Relief or Hanwell Bridge Goods Loop	A conflicting train in the up direction passes or arrives at Southall.	Standard jn margin to apply to the second movement*
A train on the down relief passes or arrives at Southall	Passing Southall East Jn crossing to the Up Relief or Hanwell Bridge Goods Loop from the Up Main, SWL or DBL at Southall	Standard jn margin to apply based on passing time or arrival time at Southall of second movement*
Pass Southall station on the DML	From DRL to SWL or DBL at Southall	2
Pass Southall station on the UML	From DRL to SWL or DBL at Southall	2
Pass from DRL to SWL or DBL at Southall	Pass Southall station on DML	3½
Pass from DRL to SWL or DBL at Southall	Pass Southall station on the UML	3½
For Southall West Jn, the correct Junction Margin to be applied is to be based on the slowest set of crossovers which the first train will travel over. ***Trains running Up Main or Up the Down Main cannot arrive or pass Southall whilst a conflicting crossing move is taking place at Southall East Junction** **Trains running Up Relief can arrive at Southall whilst a conflicting move is taking place at Southall East Junction (but cannot depart the station)**		

Southall	
Dwell Time	
Class 165/6	½* #
Class 387/769	½ *
* 1 minute for Up services calling 0615 – 0930 and 1630 – 2000 Monday to Friday	
# 1 minute in the Down direction all day	
Platform Reoccupation	2 (Up and Down Relief Lines only)

Southall West Jn		
Crossing and conflicting moves		
First Movement	**Second Movement**	**Margin**
Passing Southall West Jn crossing to the Up Main, SWL or DBL at Southall from the Up Relief, Up Main or Hayes Goods Loop	A train in the Down direction passes or arrives at Southall.	Standard jn margin to apply To be applied before the next TIPLOC west of Southall*
A train in the Down direction from SWL or DBL at Southall or Southall Down Brentford Sidings crossing to the Down Main or Down Relief.	Conflicting train in the Up direction passes or arrives at Southall	Standard jn margin to apply based +1 minute on passing time or arrival time at

		Southall of second movement
A train in the Down direction passes or departs from Southall	A train in the Down direction from SWL or DBL at Southall or Down Brentford Sidings crossing to the Down Main or Down Relief.	Standard jn margin to apply between departure or passing time at Southall of first movement, and departure or passing time at Southall or Down Brentford Sidings of second movement.

For Southall West Jn, the correct Junction Margin to be applied is to be based on the slowest set of crossovers which the first train will travel over.

***Trains can arrive and depart from Southall Station whilst a conflicting move is taking place at Southall West Junction, a junction margin time should be applied before the next TIPLOC in the down direction if a conflicting move will occur as Southall West Junction is not a mandatory timing point in the down direction**

There should be no pathing added between Southall and Southall West in the down direction

Hayes & Harlington

Adjustment to Sectional Running Time

Movement	Reason	Timing Load	Value
Trains arriving at Platform 5	Approach control	345 All others	{1½} {1}
Trains departing from Platform 5	Slow crossover	345	{½} approaching next timing point
Up freight to Hayes Tarmac Terminal	Slow speed access via Position Light signal	Freight	{1}
Up train to Hayes Goods Loop	Approach control	All	{½}

Down train from Hayes Goods Loop or Hayes Tarmac Terminal pass/depart	Up stopping train arrive Platform 4	4
Down train from Hayes Goods Loop or Hayes Tarmac Terminal pass/depart	Up non-stop train on RL pass Heathrow Airport Jn	3½

Planning Note

Hayes Tarmac Sidings can accommodate only one train at a time.

See junction margin at Heathrow Airport Jn when train is being followed by a freight towards Hayes Goods Loop or Tarmac Sidings

Heathrow Airport Junction

Adjustment to Sectional Running Times

Movement	Reason	Timing Load	Value
A down train from Southall towards Heathrow Airport (Down Main only)	Not crossing Heathrow Airport Jn at linespeed	387/110	+{½}
Up Trains crossing from RL to ML at Stockley Jn that do not call at Hayes and Harlington	Acceleration	80x 9/10 car	1 approaching next timing point
Up Trains crossing from RL to ML at Stockley Jn that do not call at Hayes and Harlington	Acceleration	16x / 387 / 769 / 80x 5 car 75-57210/75-57280/75-57350	½ approaching next timing point
Up train from Heathrow Airport Jn having come from Heathrow Airport (Up Main only)	Acceleration	387/110	½ approaching next timing point

These adjustments are not required:

- On the relief lines in either direction
- When running bi-directionally at Hayes & Harlington, or,
- When using 387/90 or 387/100 timing loads

Signalling Limitations

It is not possible to add pathing time to trains timed at Hayes and Harlington between Heathrow Airport Jn and Hayes and Harlington (both directions) as there are no intermediate signals.

Where the leading train calls at Hayes and Harlington, the headway margin is offset, applying between departure of the leading train from Hayes and Harlington and following train at Heathrow Airport Jn, as yellow signals will be shown at Heathrow Airport Jn till Hayes and Harlington is clear.

Where a train is planned from Heathrow Airport to run ahead of a train from Slough direction and both booked via ML, any pathing should be applied to the second train approaching Heathrow Airport Jn and not at Stockley Jn. This is due to ARS requirements.

Junction Margins

First Movement	Second Movement	Margin	Reason
Train departs Hayes and Harlington in the Up direction	Train passes Heathrow Airport Jn towards Hayes Goods Loop or Tarmac Sidings	1½	Freight trains will be decelerating to approach 15mph crossover 8197 and so will be unaffected by receiving yellow signals at Airport Jn

Stockley Junction

Adjustment to Sectional Running Time

Movement	Reason	Timing Load	Value
Up trains crossing from Up Relief to Up Main.	Acceleration	All	+{½} approaching next timing point
Down trains crossing from Down Main to Down Relief.	Slow crossovers/ Deceleration	All	+{½}

Junction Margins

First Movement	Second Movement	Margin
Pass Heathrow Airport Jn on Down Relief	Cross Stockley Jn from Up Relief to Up Main	3
Cross Stockley Jn from Up Relief to Up Main	Pass Heathrow Airport Jn on Down Relief	2

West Drayton ARC

Planning Restrictions

Up trains routed to West Drayton ARC Terminal should arrive in Dawley Up Goods Loop before propelling into the terminal.

Down Trains routed to West Drayton ARC Terminal must run via the URL from Hayes And Harlington to Dawley Up Goods Loop. They must then complete a run round in Dawley Loop before propelling into the terminal. Consideration should be given to capacity on the URL to allow the run round move to take place. Alternatively, trains can run beyond Dawley UGL, run round and approach in the Up Direction.

West Drayton

Dwell Time

Class 165/166/387/769 (Down Direction)	½
Class 165/166/387/769 (Up Direction)	1

West Drayton

Adjustments to Sectional Running Times

Movement	Reason	Value
Train arriving or passing through Platform 5 from London.	Slow Speed crossover	{1}
Up trains from Colnbrook Branch passing West Drayton	Slow speed off branch	{1} Approaching next timing point

Planning Restriction

Trains longer than 71SLU planned to dwell in West Drayton Loop/Platform 5 in the down direction will foul the Relief lines. Therefore if a train longer than 71 SLU is planned, junction margins must be based on the trains departure time from West Drayton, not its arrival time.

Junction Margins

First Movement	Second Movement	Value
Up train depart West Drayton on Relief Lines	Down train from Relief Lines to West Drayton Loop or Colnbrook Branch	2
Up non stop train pass/depart Slough on Relief Lines	Down train from Relief Lines to West Drayton Loop or Colnbrook Branch	5½ *
Down train from Relief Lines to West Drayton Loop or Colnbrook Branch	Up stopping train depart West Drayton on Relief lines	2 if first train is freight 1 if first train is passenger

From Paddington	5	6	8
From Marlow/Bourne End	4		

Signalled Moves

It is not possible for a train to be signalled into Platform 5 from the Down Main or Down Relief Line, via Maidenhead East Junction, when a train is arriving into platform 4 in the up direction

Class 16X services arriving into Platform 5 from the east, should be no more than **5** vehicles in length.
This is due to the presence of an intermediate Stop-Car Marker, which ensures that services from Marlow can be routed permissively into Platform 5, even when the London end of the platform is occupied.

Movements from Platform 5, shunting to another platform, cannot be routed via Maidenhead East, and should be timed via the stabling lines.

Platform Reoccupation

Arriving Platform 14 from Down Relief or Arriving Platform 13 from Up Relief (in Down Direction)	Approach Control	All Traffic Except 345 and 345-T	{½}
Approaching Platform 3 from Reading High Level Jn	Approach control	15x / 16x / 22x 387/319/769	{1}
Approaching platforms 1, 2, and 3 from Oxford Road Jn having passed Reading West	Approach control and slow speed into platform	15x / 16x / 22x 387/319/769	{1}
Down DML to pass platform 7 or 8	Lower linespeed through platform	Class 4 Freight Class 6 Freight	{½} {1}
Down DML to pass platform 10	Lower linespeed through platform	Class 4 Freight Class 6 Freight	{1} {½}
Down DRL to pass platform 14	Approach Control	Class 4 Freight Class 6 Freight	{1}
Down URL to pass platform 13	Approach Control	Class 4 Freight Class 6 Freight	{1}

Connectional allowance	7* * 12 mins to be allowed for connections between train and scheduled Rail Replacement bus services

Dwell Time	
LH / 80x	2 3 minutes for Down West of England Summer Saturday trains (Periods E, F and G) via GW500 until 1300 4 Down/Up Sleepers
Class 220 & 221	2
Class 165/6 & 387/319/769/345	1 2 minutes applies during peak hours of 07.00 - 09.00 and 16.00 - 19.00 Mondays to Fridays

Platform re-occupation	**Margin**
All platforms following moves	3
Platforms 7-12 & 15 opposing direction moves	4
Platforms 13 & 14 opposing direction moves	4 (can be reduced to 3 when the second train has a minimum of (1) pathing time approaching Reading)

Planning notes
It is not possible to share a platform with a 9 car class 345.
Care must be taken when dwelling/ pathing a train between Reading and Oxford Road Jn on the Feeder lines, to ensure held train does not block access to other lines (see 5.4.1 GW225)

Signalling Limitations
There is no down signalled route into Platform 11 from Kennet Bridge Jn as up ML is not reversible There is no down signalled route into Platform 10 on the Up Main Line from Kennet Bridge Jn as up ML is not reversible. No additional allowance is to be added to freight schedules over 4400t approaching Reading coming from Oxford Road Jn on the Feeder Relief Line. This is due to the curvature and incline. All additional time to be added as pathing approaching Southcote Jn or Oxford Road Jn or to be added as a dwell in Reading Station.

Turnround Allowances	**L/H**	**Class 387/319/769/ 345**	**Power door DMU**	**Class 80X (5 Car)**	**Class 80X (9/10 Car)**

Reading					
From Banbury		5	5	6	8
From North of Banbury	30		15 20 minutes for class 22X		
From Bedwyn/Newbury/ Oxford		5	5	6	8
From Hereford/Worcester			15	15	15
From Didcot/Henley/ Basingstoke		5	5		
From South of Basingstoke			10

Tilehurst

Crossing and conflicting moves

First Movement	Second Movement	Margin
Departure from Tilehurst down relief platform up direction (reversing move)	Arrival into Tilehurst down relief platform or down main platform having crossed down relief to down main at Tilehurst East Jn	5 minutes

Turnround Allowances (From Paddington)

Class 80X (5 car)	6
Class 80X (9/10 Car)	8
Class 16x/387/319/769	7

Moreton Cutting

Adjustment to Sectional Running Times (to be shown after this location)

Movement	Reason	Timing Load	Value
Crossing at Moreton Cutting having stopped at Didcot East Junction	Acceleration	Class 4 600T and 800T	{½}
		Class 6 1000T and 1200T	{½}
		Class 4 1000T	{1}
		Class 6 1400T	{1}
		Class 4 1200T and 1400T	{1½}
		Class 6 1600T and 1800T	{1½}
		Class 4 1400T	{2}
		Class 6 2000T	{2}
		Class 4 1600T	{2½}
		Class 6 2200T	{2½}
		Class 6 2400T	{3}

Didcot East Junction

Adjustment to Sectional Running Times

Movement	Reason	Timing Load	Value

Train on Up Main or Up Relief that has departed Didcot Yard	Acceleration	All freight	{5} approaching next timing point
Pass to platform 4 or 5 at Didcot from ML or RL	Approach Control	All	{1½}

Crossing and conflicting moves

First Movement	Second Movement	Margin
A down train crossing from the down main to down relief or down avoider passes Didcot East Jn	An up main service from the direction of Wantage Road passes Didcot Parkway	2
A down train crossing from the down main to down relief or down avoider passes Didcot East Jn	An up main service from the direction of Wantage Road departs Didcot Parkway	1
A down train crossing from the down relief to the down avoider	A down train from the down relief passes Didcot East Jn	3
Up Relief to Up Main line services having stopped at Didcot Parkway	Down Relief line services to down Didcot Avoiding line	4½

Signalling Limitations

It is not possible to add pathing time between Didcot Parkway Platforms 3,4 or 5 and Didcot East Jn because the protecting signal for Didcot East Jn is at the east platform end at Didcot Parkway. Pathing time or increased dwell time should be added at Didcot Parkway instead.

Didcot Parkway

Adjustment to Sectional Running Times

Movement	Reason	Timing Load	Value
Pass Didcot Parkway platform 3 towards Didcot North Junction	Approach control	Passenger Freight	{½} {1}
Pass Didcot Parkway platform 3 towards Didcot Goods Loop	Approach control	Passenger Freight	{½} {1}

Dwell Time

80x, L/H, 220 & 221	1½
80x, L/H, 220 & 221 Up direction between 07:00 and 09:30 - Monday to Friday	2
80x, L/H, 220 & 221 Down direction between 16:45 and 19:45 - Monday to Friday	2
Class 165/6	1
Class 387/319/769	1

Overlap Restrictions

First movement	Second movement	Margin
Train from Up Oxford arrive Platform 4	Train depart platform 3 to Didcot Goods Loop	1
Train depart platform 3 to Didcot Goods Loop	Train from Up Oxford arrive Platform 4	3½
Train depart platform 3 towards Didcot Goods Loop	Train from Up Oxford pass Platform 4	4
Train from Up Oxford arrive Platform 4	Train depart Didcot Goods Loop to Platform 3	1
Train depart Didcot Goods Loop to Platform 3	Train from Up Oxford arrive Platform 4	3½
Train depart Didcot Goods Loop to Platform 3	Train from Up Oxford pass Platform 4	4

The above margins are applicable because when 8556 catch points on the Didcot Goods Loop are set in reverse, the interlocking prevents the route into platform 4 from Up Oxford being set.

Platform Re-occupation	Margin

Main Line Platform for following moves	4
Relief Line Platform for following moves	3

Planning Restrictions

Trains held in the down direction at Platform 3 that are longer than 562m (exclusive of stand-back allowance) will foul Didcot East Jn. Therefore, junction margins at Didcot East Jn must be based on trains' departure time at Didcot Parkway if over length.

Turnround Allowances	DMU	Class 80X (5)	Class 80X (9/10)	Class 387/319/769
From Paddington	7	6	8 (9 car only*)	7*
From Hereford / Worcester	7	6	8 (9 car only*)	
From Bicester/Reading/Oxford/ Banbury	5♣			5♣

♣: 3 minutes acceptable, if not sequential.

*A 10-car Class 80X cannot reverse in any platform at Didcot Parkway due to being overlength

*A 9-car Class 80X can only reverse in platform 5 at Didcot Parkway due to length

*A 12-car Class 387 cannot reverse in any platform at Didcot Parkway due to being overlength.

*Overlength formations should be timed ECS to/from Didcot West End prior to next working.

Bristol East Junction

Junction Margins

First Movement	Second Movement	Margin
Between all conflicting moves except the below		2½ (If first train is a passenger) 2½ (If first train is a freight 50 SLUs or less) 3 (If first train is a freight is 51 to 80 SLUs) 3½ (If first train is a freight over 80 SLUs)
Up train to Dr Days Jn via Up Filton Relief (UR) weaving via 7037pts	Down train from Dr Days Jn via Down Filton Relief (DR)	3½*

*Pathing time on the Down Filton Relief must be applied approaching Dr Days Junction to achieve this margin. This is due to the position of the signal.

Bristol Temple Meads

The rules in this section make reference to ‘near’ and ‘far’ platforms, reflecting terminology used operationally.

Bristol Temple Meads

'Near' refers to the platform at the nearest end of the station, to the direction of approach (even-numbered platforms for Up services and odd-numbered platforms for Down services).

'Far' refers to the platform at the furthest end of the station from the direction of approach (odd-numbered platforms for Up services and even-numbered platforms for Down services).

Restrictions relating to vehicle length

Refer to section 5.4 for Bristol Temple Meads Platform lengths

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
From Bristol West Jn to Bristol Temple Meads via the Carriage Lines	Acceleration from lower speed route	All traffic	+ {½}

Overlap Restrictions

Southampton/Weymouth		15	15		

Normal platform usage or guidance (shown by arrival)

Wherever possible, through trains should be timed into the far platform, and reversing trains should be timed into the near platform. The exception to this principle is through trains arriving in the down direction into Platforms 3/4, which should be timed into Platform 3 to avoid passengers having to walk back to the gates from Platform 4.

When units are required to attach, involving a movement past a Platform Sharing Signal to the far platform, a minimum station dwell of 5 minutes must be applied to the second train. This incorporates the track section occupancy of 2 minutes required by the interlocking, for the Platform Sharing Signal (position light) to clear, and an attaching allowance of 3 minutes.

Prior to submitting a bid Train Operators are requested to discuss with their Network Rail Business Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum Turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).

Planning Restriction

Class 170 are prohibited from platforms 1, 2, 11, 12 and West Carriage Sidings.

Bristol West Junction

Junction Margins

Time needed between all conflicting moves	2½ (If first move is a passenger service/ECS/Light loco) 2½ (If first move is a freight up to 50 SLUs) 3 (If first train is a freight up to 80 SLUs) 3½ (If first train is a freight up to 103 SLUs)

A maximum of 3 trains may be held at Bristol West Junction as follows:-
Train A on the West Carriage Line at Signal BL6728
Train B on the West Carriage Washing Siding at Signal BL6730
Train C on the West Carriage Line at Signal BL6734

A minimum of 25 minutes is required to run round a loco hauled train at Bristol West Junction.

Only trains which may be walked through should reverse here (Except where two drivers are provided). Trains which cannot be walked through are to reverse at Bedminster.

Arrive Exeter TMD	Conflicting departure from Exeter St Davids to Dawlish Warren	2	
Minimum interval between arrivals on Exeter TMD		15	A reduced interval may be planned by prior agreement with GWR
Minimum interval between departures from Exeter TMD		15	A reduced interval may be planned by prior agreement with GWR

Platform Re-occupation	4 Where trains are using the same platform in the OPPOSITE direction, the platform re-occupation time will also be 4 minutes with a minimum of 6 minutes at Platform 1 between a departure to and arrival from Exeter Central.
	3 Platform 5 Up direction, same direction moves
	3 Platform 4 Down direction, same direction moves

Planning Note

Permissive arrivals from Exeter Central are prohibited. Trains must not be scheduled to depart Exeter Central into Exeter St Davids platforms 1 or 3 until that platform is vacant and the route reset. Pathing should not be added from Exeter Central to Exeter St Davids. It is permitted to shunt into an occupied platform from E335 Signal on the Down Waterloo, however please note that there is no shunt route from Exeter Central to E335 due the severe gradient and therefore such moves can only originate from Exeter St Davids.

See Overlap Restrictions for further details of margins for an arrival from Exeter Central into Platform 1.

Prior to submitting a bid, Train Operators are requested to discuss with their Network Rail Business Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).

Station Working

Plymouth

Increased allowances apply as under:- Locomotive change only 10 m, Portion detached front 20 m, Portion detached rear 15 m, Portion attached front or rear 25 m. To apply to locomotive-hauled trains only

Normal platforms used:- All through platforms are two-way to provide maximum flexibility and permissive working is allowed. Through services normally use platforms 4 and 5 in the down direction and 6, 7 and 8 in the up direction. When track capacity allows platform 4 may also be used for up trains.
Dock 2 - Stabling ECS and when required for parcel/mail trains Not to be used for stabling light locos.
Dock 3 - Stabling ECS and when required for parcel/mail trains Not to be used for stabling light locos.
Platform 3 - To and from Cornwall, including Gunnislake. Maximum capacity 2 x Class 150 units or equivalent.
Platform 7 - Up sleeper services.

Prior to submitting a bid, Train Operators are requested to discuss with their Network Rail Operational Planning Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum Turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).

Class 80x unable to attach/detach on platform 6 as this may result in a SPAD of the protecting signals.

Down train arrives / passes Platform 1	Up train passes Platform 2	3*	*For 9/10 car Class 80x formations calling in the down direction refer to following items
Down train formed 9/10 car Class 80x departs Platform 1	Up train passes Platform 2	2½	
Down train formed 9/10 car Class 80x departs Platform 1	Up train departs Platform 2	2	
Down train formed 9/10 car Class 80x departs Platform 1	Down train passes St Budeaux Jcn / departs Ferry Road	1	

Please note – While a Class 80x formed of 9/10 cars is standing in Saltash Platform 1, the junction in rear is fouled and the AB section from St Budeaux Ferry Road remains occupied. It is not possible for an Up train to depart or pass Saltash or a following Down train to enter the single line section until after the train in question has departed Saltash.

An Up train approaching Saltash under cautionary aspects is already braking for the 15mph permanent speed restriction and therefore the normal SRTs are not compromised.

Honeybourne North Junction

Trains to/from Honeybourne Sidings or Long Marston

Trains from Moreton in the Marsh – Trains from Moreton in the Marsh going to either Honeybourne Sidings or Long Marston will come to a stand behind E2483 Signal. E2483 Signal is a ground position signal. When the route is set from the Down Main to Honeybourne Through Siding, E2483 will show a proceed aspect. The formation of the train must have a driving cab at both ends.

Trains to Moreton in the Marsh – Trains from either Honeybourne Sidings or Long Marston going to Moreton in the Marsh will come to a stand behind E2442 Signal at Honeybourne North Jn. E2442 Signal is a 3-aspect signal with an associated position light signal. When the route is set for the train to proceed towards Moreton in the Marsh, E2442 will show either a yellow or a green main aspect. The position light signal only applies to movements towards the Through Siding. The formation of the train must have a driving cab at both ends.

Junction margins

First Movement	Second Movement	Margin

GW450 STOKE GIFFORD JUNCTION TO BRISTOL EAST JUNCTION

Train passes or arrives platform 1 from Bristol Parkway	Train departs platform 2 towards Bristol Parkway using DF	Simultaneous
Train passes or arrives Platform 1 from Bristol Parkway	Train passes Platform 2 towards Bristol Parkway using DF	1 minute
Train passes or departs Platform 2 towards Patchway	Train passes or arrives Platform 1 from Patchway	4
Train passes or departs Platform 2 or 4 towards Patchway	Train to Filton Abbey Wood departs Filton Sig 2052 or passes Filton West Junction	2
Train passes or departs Platform 2 towards Bristol Parkway	Train to Filton Abbey Wood Platform 1 departs Filton Sig 2052 or passes Filton West Junction	1

Rules regarding position of signals (On ML BL1580. On RL BL1578)

A train cannot cross from down Bristol line to platform 1 in the down direction (down Filton main) whilst there is a train standing in platform 2 (up Filton main).
A train cannot cross from Filton chord line to platform 1 in the down direction (down Filton main) whilst there is a train standing in platform 2 or platform 4 and cannot cross to platform 3 whilst there is a train in platform 4.
A train cannot enter platform 3 from down Bristol line in the down direction (down Filton relief) whilst there is a train standing in platform 2 (up Filton main) which is running towards patchway or Filton chord.
Only one train routing towards Patchway/Filton chord may call at Filton Abbey wood at any one time.

All trains longer than platform length crossing from Patchway direction and stopping in platform 1 will block Filton Jn No.1 points preventing a second train going from platform 2 towards Bristol Parkway

A down train terminating in platform 2 cannot turnback. Can only turnback in platform 1.

Dwell Time

15x/16x/GWR Short Form HST (HSTGW4) /80x	1*

GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME AVOIDING LINES (BERKS. AND HANTS)

Reading

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Trains booked to call at Reading West in the Up Direction (towards Reading Station). (Does not apply to trains routed to Reading platforms 1, 2 and 3).	Because of the mandatory timing point at Oxford Road Jn, it is not possible to calculate a Start to Pass SRT less than 30 secs between Reading West Stn and Oxford Road Jn. This is then further complicated by system issues not allowing a departure time at Reading West and a passing time at Oxford Road Jn to be the same. Therefore the adjustment allowance must be added between Oxford Road Jn and Reading Station.	150, 16x, 220, 221, 387, 319, 769, 80x	{-½}

Oxford Road Jn

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Trains booked to call at Reading West in the Down Direction (from Reading Station)	Because of the mandatory timing point here, it is not possible to calculate a Pass to Stop SRT less than 30 secs between Reading West Stn and Oxford Road Jn. This is then further complicated by system issues not allowing an arrival time at Reading West and a passing time at Oxford Road Jn to be the same. Therefore, the adjustment allowance must be added between Reading Station and Oxford Road Jn.	150, 16x, 220, 221, 387, 319, 769, 80x	{-½}

Planning note

Care must be taken when dwelling/ pathing a train between Reading/ Reading West Jn and Oxford Road Jn on the Feeder/ West Curve lines, to ensure held train does not block access to other lines (see 5.4.1 GW220/ GW225)

Reading West

Dwell Time

Class 16x (non-DOO)	1

Junction Margins

First Movement	Second Movement	Margin
Train from Down Feeder Relief and Up Feeder Main.	Departure from Reading West	2½

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Trains from Reading West Curve that are calling at Reading West Station.	Because of the new Mandatory Timing Point at Oxford Road Jn SRT's between Oxford Road Jn and Southcote Jn have been calculated based on trains operating to/from the route via Reading Station and therefore some differences for certain Timing Loads are required to take into account slowing to go to/from Reading West Curve.	220, 221	{1}

Connectional Allowance	3

Signalling Limitations

It is not possible to add pathing time between Reading West and Oxford Road Jn because the protecting signal for Oxford Road Jn is at the east platform end at Reading West. Increased dwell time should be added at Reading West where it would otherwise be necessary to add pathing time.
It is not possible to add pathing time between Oxford Road Jn and Reading West because there are no intermediate signals. Additional Pathing time should be added approaching Oxford Road Jn instead.

Southcote Junction

Adjustments to Sectional Running Times (allowance to be shown after this location)

GW610 CRANNAFORD L.C. (INCL.) TO EXETER ST. DAVID'S
Pinhoe
Planning note
A train that is required to depart Pinhoe Platform 1 in the Up direction and shunt behind Signal EJ1 prevents a train in the Down direction from being signalled beyond Honiton station (SE4807 or SE4809). Therefore, any Down direction trains must be planned to depart Honiton no less than 1 minute after a shunt move has arrived into Pinhoe Platform 2.

GW610 CRANNAFORD L.C. (INCL.) TO EXETER ST. DAVID'S

Exmouth Junction

Adjustment to Sectional Running Time (shown approaching this location)

^ Plus 5 minutes if a shunt move is required

***** : Where trains are using the Up platform in the opposite direction, the minimum platform re-occupation time is 4 minutes.

The time allowed for a train to arrive at Paignton and then depart for Goodrington C.H.S. should be 9 minutes. This allows for detraining of customers; closing doors; contacting the signaller and traincrew lowering the barriers at Paignton South T.M.O. except when an attendant is on duty at Paignton South. In addition, the person in charge of the Yard must be contacted for permissions to allow access to the single line/yard. This will apply to all train types.

In addition, once a movement has been accepted from Goodrington C.H.S. and Signal PN12 cleared for the same, No route can be set from Signal PN3 on the Down Line (from Torquay) for arrivals into the station - a minimum of 3 minutes should elapse. Likewise, once Signal PN3 has been cleared for an arrival at Paignton from the Torquay direction no route can be set for an arrival from Goodrington C.H.S. Once that move is stationary a route from Goodrington C.H.S. can be set. It should be noted that Down trains can be routed either into DPL or UPL at Paignton. However, depending on the turnround allowances and occupation of the UPL it is desirable they be timed into the UPL.

Alternatively, a unit may run from the DPL into the UPL via Paignton Signal 3. This move should coincide with a train departing from Paignton (towards Torquay) to minimise the occupation of Paignton North crossing. All locomotives - hauled services are required to run to Goodrington CHS for run round purposes.

When more than one movement is to take place to and from (or within) Goodrington Carriage Sidings the sidings and line to Paignton are under the control of a “Person in Charge” in the event of more than one train being timed into Goodrington the Area Production Manager must be informed for staffing purposes.

Trains are to be timed as a single move Paignton - Goodrington - Paignton with the TID of the next working with the exception of DB Cargo; where each movement will be timed as separate trains, each with the appropriate TID relating to the incoming or outgoing passenger train.

Paignton South Level Crossing Attendant

A level crossing attendant is provided at Paignton South on Period EFG Saturdays between the hours of 0900-1800. During these periods, the time required to unload/secure terminating down trains in Paignton platform 1 prior to running ECS to Goodrington Sidings can be reduced to standard values. In these circumstances the 9-min allowance (shown above) does not apply.

GW628 LAIRA JUNCTION TO PLYMOUTH FRIARY SS VIA SPEEDWAY JUNCTION

Laira Depot

Trains from Plymouth to Laira Depot run under normal headway between Plymouth and Lipson Junction/Laira Junction see below for allowances around Mount Gould Junction.

Trains from Laira Depot must leave at a minimum of 15 minutes intervals.

Laira Junction
Routes to and from this location to Laira Depot
Inbound
Empty 220s/221s, 80x, GWR Short Form HST (HSTGW4), DMU formations or Loco Hauled Passenger Vehicles from Plymouth to Laira Depot are normally routed via Mount Gould Junction then via the Washing Apron to Laira Depot.
Empty 220s/221s, 80x, GWR Short Form HST (HSTGW4), DMU formations to Laira Depot may reverse at Mount Gould Junction without flushing or washing to avoid congestion and will perform these operations on the outward journey see the allowances for Mount Gould Junction. Such working must be agreed by the TOC with the Depot Manager at Laira.
Empty trains may only be routed via Laira Junction where it is possible for the driver to walk through the train as there is no walking route.
Loco hauled NPCCS vehicles are normally routed via Mount Gould Junction to reverse.
Light Diesel locomotives between Plymouth station and Laira Depot will normally be routed via Laira Junction.
Outbound
Empty 80x & GWR Short Form HST (HSTGW4) departing from Laira Depot to Plymouth station will normally be routed via Mount Gould Junction where they will reverse. However, it is possible to route them via Laira Junction DGL to correct the orientation of the train.
Empty 220s/221s single sets will normally be routed via Laira Junction.
Empty loco hauled trains departing from Laira depot will normally be routed via Mount Gould Junction.
Empty trains where it is not possible to walk through the train may only be routed via Laira Jn if reversing on the Down Goods line. Empty trains where it is possible to walk through the train may reverse on either the Down Goods line or Main line.
Light Diesel locomotives between Laira Depot and Plymouth station will normally be routed via Laira Junction.
Method of working loco hauled trains
Loco hauled trains are normally worked from Mount Gould Junction to Laira Depot by the Depot pilot locomotive with the train engine remaining attached or following.

Mount Gould Junction
Two 80x, GWR Short Form HST (HSTGW4), DMU formations or Class 220/1 units may be timetabled to be held in the section between Lipson Jn and Mount Gould Junction awaiting entry to the flushing apron.

Gloucester

An arrival into Platform 4	A departure from Platform 2 via the UML to Horton Road Jn	1 minute
An arrival into any through platform	An opposite direction arrival into the same platform for attachment purposes	4 minutes
A departure from Platform 2 to Horton Road Jn via UML	An arrival into Platform 1 from Horton Road Jn	3*

*If the first and second moves conflict at Horton Road Jn then a junction margin will apply at that location

Shunting Margins – G454, G448, G446, G444 & Gloucester CHS

First Movement	Second Movement	Margin	Notes
Train towards Barnwood Jcn or Gloucester Yard Jcn passes Horton Road Jcn	Conflicting shunt move departs Gloucester or Gloucester CHS	1 – following passenger 2 – following freight	Apply passenger margin when following light engine or ECS
Shunt move arrives Gloucester or Gloucester CHS	Conflicting Down train to Gloucester or Gloucester CHS passes Horton Road Jcn	1½	
Shunt move arrives Gloucester or Gloucester CHS	Conflicting Up train towards Horton Road Jcn passes Gloucester	2½	
Down train from Horton Road Jcn or shunt move arrives Gloucester or Gloucester CHS	Conflicting shunt move departs Gloucester or Gloucester CHS	1	
Down train towards Awre passes Gloucester	Conflicting shunt move to G448, G446 or G444 signal departs Gloucester	1 – following passenger 2 – following freight	Apply passenger margin when following light engine or ECS
Up train to Horton Road Jcn departs Gloucester platform 4	Shunt move to Gloucester platform 4 departs G454 signal	2	
Shunt move from G454 signal arrives Gloucester platform 4	Train departs Gloucester CHS	1	
Down train from Horton Road Jcn arrive Gloucester platform 1	Shunt move to G448, G446 or G444 signal departs Gloucester platform 2	2	A train standing at G448 or G446 signal prevents any movement over the UML to/from Horton Road Jcn, or any passenger movement towards Barnwood Jcn.
Down train from Horton Road Jcn arrive Gloucester platform 2 via UML	Shunt move to G446 or G444 signal departs Gloucester platform 1	Simultaneous	
Down train from Horton Road Jcn arrives Gloucester platform 1, 2 or 4	Conflicting shunt move to Gloucester platform 1, 2 or 4 departs G446, G448 or G454 signal	1½	If shunting into an occupied platform, apply {½} only due to short distance travelled

Gloucester

Down train from Horton Road Jcn arrives or passes Gloucester	Conflicting shunt move departs G444 signal	1	A train standing at G444 signal prevents an Up train from entering the UGL at Horton Road Jcn.
Up train from Gloucester passes Horton Road Jcn	Conflicting shunt move departs G444 signal	1 – following passenger 2 – following freight	Apply passenger margin when following light engine or ECS
Shunt move to Gloucester platform 4 or Gloucester CHS departs G444 signal, routed via No.1 or 2 Spur	Up train from Gloucester UML, platform 1 or 2 passes Horton Road Jcn routed to UGL	3	If the shunt move is routed to Gloucester platform 1, 2 or UML, apply appropriate margin at Gloucester

Shunting Margins – G419 & G31

First Movement	Second Movement	Margin	Notes
Down train to Awre departs or passes Gloucester	Conflicting shunt move to G419 signal departs Gloucester	2½	If first train runs via UML to Over Jcn then these moves are simultaneous
Down train to Awre departs or passes Gloucester (is not routed via UML to Over Jcn)	Conflicting shunt move to G31 signal departs Gloucester	3	
Down train via UML to Over Jcn departs or passes Gloucester	Conflicting shunt move to G31 signal departs Gloucester	4	
Shunt move from G419 or G31 signal arrives Gloucester	Conflicting Down train departs Gloucester	1	
Shunt move from G419 or G31 signal arrives Gloucester	Conflicting Down train passes Gloucester	2½	
Shunt move from G419 or G31 signal arrives Gloucester	Up train from Awre arrives or passes Gloucester	4	

Planning notes

It is not permitted to show pathing time approaching Gloucester Platform 2 in a down passenger train that is routed via Platform 1. Any pathing time should be applied approaching Horton Rd Jn.

For a down train approaching Gloucester Platform 2 via UML, a maximum of 1 minute of pathing time is permitted between Horton Rd Jn and Gloucester (in addition to the adjustment value for approach control). Any excess pathing time should be applied approaching Horton Rd Jn.

Any train using Platform 4 or the Up Relief when travelling towards Lydney needs to be timed at Over Junction

Platform Workings for Class 80x

Platform 1	Can accommodate 5-car 800/802 only
Platform 2	Can accommodate 5 or 9 car 800/802
Platform 4	Can accommodate 5, 9 or 10 car 800/802

Lydney

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
From the Down Main to the Down Loop and Up Main to the Up Loop	Slow turnout speed into the loop (15 mph)	All traffic	+{2}

Dwell Time

150 to 231 (Down platform)	1 (maximum)
150 to 231 (Up platform)	1

Level Crossing Restriction

To prevent excessive level crossing barrier down-time, passenger trains stopped at Lydney in the Down direction only, to be advertised earlier by the amount of recovery / pathing allowances shown between Gloucester and Lydney.

Chepstow

Dwell Time

Severn Tunnel Junction

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
From Down Main to Down Relief prior to Severn Tunnel Junction	Slow speed turnout with approach control	Passenger and ECS Freight	{1½} # {2} #

A quicker crossover of 70mph is available at Severn Tunnel Jn that would not require an adjustment allowance

Dwell Time

For all other entries, refer to GW900

GW730 SHREWSBURY SUTTON BRIDGE JUNCTION TO NEWPORT MAINDEE WEST JUNCTION (NORTH AND WEST LINE)

English Bridge Junction

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Trains towards Abbey Foregate Jn	Approach control	All	{1}

If a train of over 38SLUs is stopped at Abbey Foregate Jn in the Wellington direction, then a 3 minute margin must apply from the train departs Abbey Foregate to the next train passing English Bridge Jn. This is to mitigate against the length of train fouling the junction.

Junction Margin
A margin of 3 minutes is required between a train using the Up main from Shrewsbury P3 to the next train from Sutton Bridge Jn

Sutton Bridge Junction

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
From Shrewsbury to Cambrian Line	Slow speed crossover	DMU	{½}

Junction Margin

When Dorrington Signal box is switched-out, creating a block section from Marsh Brook L.C. to Sutton Bridge Jn, Shrewsbury bound trains may be planned following junction fouling moves at Sutton Bridge Jn on the normal headway from Dorrington plus 2 minutes. This permits running under clear signals.

Church Stretton

Platform usage

Platform detail MUST be shown

If trains to and from Aberystwyth are planned to pass at Dovey Junction, the up (from Aberystwyth) train must arrive into platform 2a, the down train (from Machynlleth) must travel via Dovey Jn Down Loop and then into platform 2b.
If there is no passing movement, trains to Aberystwyth are not required to travel via Dovey Jn Down Loop.

Cambrian coast trains can only use platform 1

Station Working

Units coming empty stock from Canton Depot to work services to Manchester, Holyhead, Crewe, Birmingham, Portsmouth, Brighton, Penzance and Paignton that do not require cleaning should be allowed 5 minutes in the Platform prior to departure for labelling and boarding of passengers.

Units coming empty stock from Canton Depot to work services to Manchester, Holyhead, Crewe, Birmingham, Portsmouth, Brighton, Penzance and Paignton that do require cleaning, tanking and labelling should be allowed 10 minutes in the Platform prior to departure.

Prior to submitting a bid, Train Operators are requested to discuss with their Network Rail Business Manager any service (i) with a proposed platform occupation time of longer than 10 minutes beyond the specified minimum Turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s). The maximum dwell time for through services is 15 minutes.

May be reduced to 10 minutes if a cross platform shunt is not required.

Cardiff West

Unit coupling and Reversals at Cardiff West

Units that require to be coupled at Cardiff West must only do so in the Brickyard sidings.

A train consisting of more than one unit that is not gangwayed throughout and requires the driver to change ends is only able to do this at the following locations:
Brickyard sidings
Line A (Signal CF2342)
Line E (Signal CF7048)
This does not apply when two drivers are provided (by TOC agreement only)

$ It is possible for a Down train requiring a token for the route towards Tenby to arrive in Whitland if there is no conflicting route from the branch. The Down train should arrive no less than 4 minutes before the Up train is due. The Down train will then have to wait for the driver of the Up train to hand in the token and for the signaller to deliver the token to the Down train. The minimum dwell time is the time difference between the arrival of the Down train and the departure from Whitland of the Up train plus 5 minutes for the token delivery.	
Junction Margin.	

First Movement	**Second Movement**	**Margin**
Up from Tenby	Down arrival	5

Token exchange.
Trains to/from GW950 Whitland to Pembroke Dock have to either collect or set down a token for the single line

section between Whitland and Tenby. They do this at Whitland SB, which is approximately 120 yards to the east of Whitland station. The SRTs include an allowance for this between Carmarthen and Whitland and vv.

5.4 Platform Lengths

The table below shows the maximum length of train that may use each of the platforms at the following passenger stations. All lengths are in metres. The quoted lengths are the usable lengths from ramp to ramp unless specified. The measurements take no account of the need for signal sighting. Trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director, Except where SDO or ASDO is in normal use.

STATION	PLATFORM	USABLE LENGTH	NOTES
		In metres	

Bristol TM

Platforms 3 to 12 inclusive are islands combining two platforms on each face, with the odd numbers London end and even numbers at the Penzance end Mid Platform Signals indicate the limits of each platform.

Permissive Working
Permissive working (PP) is allowed on through platform lines 3/-/12 for the purpose of attaching, detaching and platform sharing.

Classes of train 1, 2, 3 ECS, 5, 9 and 0 are allowed, together with any class of train formed only of MPV vehicles when operating as a railhead treatment or inspection train.

When a train (the second train) arrives which is due to attach to the rear of another train in a far platform, there **must** be enough room for the whole of the second train in the **near** platform.

The platform lengths shown below in the third column, are the measured lengths of the platforms, and DO NOT account for the positions of car stop markers, or stand back distances (assume 10m)

5.4.1 Loop Lengths

The table below shows the maximum length of train that may use each of the loops at the following stations. All lengths are in SLUs (Standard Length Unit); an SLU measures 21 Feet, and metres. All lengths are exclusive of an allowance of one locomotive. Check Sectional Appendix for locations where standage is not quoted. Bids for trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director. See also Section 4.5.

5.5 Timing Allowances

All allowances shown are in minutes.
SX Daytime allowances apply at all times except where specified differently in Sections 5.5.2, 5.5.3, 5.5.4, 5.5.5 and 5.5.6
All allowances are indicative for the Final Principle Rules and are subject to change.

E refers to engineering allowance
P refers to performance allowances

5.5.1 SX Daytime (See routes for applicable times)

On Monday different allowances apply on some routes until the end of the 'Sunday' allowances at the times specified in the tables below. Please refer to Section 5.5.4 for the 'Sunday' allowances section to identify the routes to which those allowances apply.

GW103 PADDINGTON TO UFFINGTON

5.5.2 SX Night Time (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section

5.5.3 SO Daytime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.5.4 SO Nighttime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.5.5 Sundays Daytime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.5.6 Sunday Night time (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.6 Watering of Steam Locomotives

The following sites only are authorised. The constraints shown must be strictly adhered to and in cases the Train Operator should produce a Method Statement describing their safety control measures, etc. and should issue suitable internal operating instructions:

Location	Constraints
Holyhead Platform 1	
Llandudno Junction Platforms 1 and 4	

It should be noted that 'Goods Line Authority' may be required for some of the locations listed above. See Section 5.1.4 above for Passenger Trains over Goods Lines

On Network Rail controlled infrastructure, work (i.e. the watering activity) may only take place under the control of a COSS.

Additional sites may be considered by the Route's Safety Review Group subject to the provision of suitable supporting documentation.

6 Timetabling Considerations

6.1 Advertised and Working Times

It is not permissible for trains to be specified to be advertised to arrive before or depart after the booked times stated in the working timetable (WTT).

It is permissible for trains to be specified to be advertised to depart before the booked times stated in the working timetable in the following circumstances;

(i) Where the WTT departure time is delayed to achieve the required headway behind a preceding train or margin following a conflicting move.

(ii) As an aid to punctual departure where this practice has been agreed between the Train Operator and Network Rail.

By agreement between the Train Operator and Network Rail, trains may be specified to be advertised to arrive after the booked times stated in the WTT. This agreement is used instead of engineering/performance allowances.

6.2 Timing of Light Locomotives

It is a general principle that all light locomotive movements will be timed.
